Recommendations to the IT manager regarding which controls and/or compliance best practices Botium Toys needs to implement, based on the risk posed if not implemented in a timely manner.

Recommendations: In this section, provide recommendations, related to controls and/or compliance needs, that your IT manager could communicate to stakeholders to reduce risks to assets and improve Botium Toys' security posture.

It is recommended that the findings related to compliance with PCI be addressed immediately as insecure storage of credit card information is a huge risk to the organization. User access policies should be established, and the principle of least privilege should be utilized to keep PII and SPII confidential. Additionally, separation of duties should be implemented so that no single system can be misused, and encryption should be used to ensure that customer data remains confidential.

Disaster recovery plans and backups are essential as they support business continuity if things go wrong. Without them, the organization is at a high risk and business productivity can be heavily disrupted if a threat is to break through.

Integrating an IDS system would help detect intrusions and mitigate potential risks. A regular schedule involving monitoring and maintaining legacy systems should be adopted to ensure their upkeep on a regular basis. Lastly, secure password systems with complex requirements should be implemented, as well as a centralized password management system. This would further improve Botium Toys' security posture.
